

EROSION CONTROL MATS APPLICATION STUDY

ACM 0158

Permanent Erosion Protection & Prevention

Cattle Trough Erosion Control

The flexible concrete mats provide a permeable with heavy load bearing capacity. Mats provides ground stabilisation and help prevent erosion. They help sediment filtration during runoff. Can be filled with crusher dust and aggregate or top dressed. to minimise sediment.

SUITABLE FOR HIGH LIVESTOCK TRAFFIC

- Cattle feed & water troughs
- Livestock & holding yards
- Pathways and tracks
- Spillways and Overflows

The pic below shows the mat being used for hard stand surface for driving on. The same principle applies to stock traffic. It gives grip for a sloped or muddy or wet surface, it is permeable to avoid mud build-up, it stops erosion of the ground underneath and is strong and flexible enough to be driven on with tractors or trucks.
